### MPLS over DSL

New Edge brings together true Class of Service (CoS) traffic management with private, business-class DSL access, which puts the performance gain of MPLS networks within financial reach of more businesses. Our award-winning MPLS over DSL offering fills the traditional gaps in service level and price between DSL and T1 connections. This means that business that rely on the performance of critical applications, including VoIP and video, now have a cost-effective option for their primary or backup network.

### MPLS over Wireless Data

For businesses seeking redundancy where DSL is unavailable or where an additional layer of protection is needed, Wireless Data is ideal as a cost-effective backup network due to its affordability, expansive coverage and inherent resistance to natural disasters and construction incidents.

\* Subject to availability. Monthly Recurring Charges (MRC) and Non-Recurring Charges (NRC) vary based on access type, length of contract term, volume, service location and availability. Bundle pricing valid through January 31, 2010.
